Professional Summary

Senior React Developer with over 8 years of experience designing, developing, and optimizing enterprise-scale web applications across banking, fintech, analytics, and AI-driven platforms. Specialized in React.js, TypeScript, JavaScript, Redux Toolkit, RTK Query, React Query, and modern frontend architecture. Proven track record of improving application performance, building reusable component libraries, designing scalable UI architectures, and integrating AI-powered solutions using OpenAI APIs. Experienced in collaborating with product managers, UX designers, backend engineers, and QA teams throughout the software development lifecycle while mentoring junior engineers and driving engineering best practices.

Core Skills

Programming Languages:

JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend Technologies:

React.js, React Hooks, React Router, Redux Toolkit, RTK Query, React Query, Context API, Zustand, Material UI, Tailwind CSS, Bootstrap, Responsive Design

Frontend Architecture:

Reusable Component Libraries, Design Systems, Custom Hooks, Code Splitting, Lazy Loading, Dynamic Imports, Virtualization, Memoization, Performance Optimization

Backend Technologies:

Node.js, Express.js, REST APIs, OpenAPI, Swagger, WebSockets

Testing:

Jest, React Testing Library, Unit Testing, Integration Testing

Developer Tools:

Git, GitHub, Postman, Webpack, Babel, ESLint, Prettier, Jira, Agile, Scrum, CI/CD

AI Development:

OpenAI APIs, Prompt Engineering, LLM Integration, AI Chatbots, Prompt Caching

Professional Experience

Wipro Limited

Dec 2024 – Present

Senior Frontend Engineer

Tech Stack: React.js, TypeScript, Redux Toolkit, Material UI, Node.js, OpenAI API, REST APIs

- Led frontend development for a secure enterprise banking platform serving thousands of users by designing scalable React applications with TypeScript and Material UI.
- Reduced initial page load time by nearly 30% through route-level code splitting, lazy loading, bundle optimization, and efficient asset delivery strategies.
- Designed and developed a reusable component library containing more than 25 strongly typed React components that accelerated feature delivery across multiple engineering teams.
- Built an AI-powered enterprise knowledge assistant using React, Node.js, Express.js, and OpenAI APIs, enabling employees to retrieve internal documentation through natural language conversations.
- Reduced OpenAI API usage costs by approximately 25% by implementing prompt caching, optimized request batching, and efficient backend orchestration.
- Improved rendering performance by identifying unnecessary component re-renders using React Profiler and applying React.memo, useMemo, and useCallback where appropriate.

- Collaborated with backend engineers and product stakeholders to define REST API contracts, streamline frontend-backend integration, and reduce feature delivery timelines.
- Mentored junior engineers through code reviews, pair programming, architecture discussions, and frontend best practices, improving code quality and maintainability across the team.
- Participated in sprint planning, estimation, technical design reviews, production deployments, and root cause analysis for critical production incidents.

GlobalLogic

Mar 2021 - Dec 2024

Senior React Developer

Tech Stack: React.js, TypeScript, Redux Toolkit, RTK Query, React Query, Material UI, REST APIs

- Architected and developed a multi-tenant enterprise analytics platform serving more than 10,000 daily active users with real-time KPI dashboards, reporting modules, and configurable widgets.
- Led the migration from legacy Redux architecture to Redux Toolkit and RTK Query, reducing application boilerplate by nearly 40% while improving state management consistency and API caching.
- Designed and implemented a reusable dynamic form framework using React and TypeScript that standardized validation, improved maintainability, and accelerated development across eight enterprise workflows.
- Increased Lighthouse Performance score from 62 to 89 by implementing image optimization, bundle splitting, deferred loading, lazy loading, and efficient asset caching strategies.
- Optimized rendering performance for large datasets containing more than 50,000 records by implementing virtualization, memoization, efficient pagination, and selective component rendering while maintaining UI interaction latency below 100 milliseconds.
- Built reusable custom React Hooks for API communication, authentication flows, pagination, filtering, debouncing, and form handling, significantly reducing duplicated code across applications.
- Improved application scalability by introducing modular folder structures, reusable utilities, shared services, and common UI components following modern React architecture principles.
- Worked closely with UX designers to translate complex Figma designs into highly responsive, pixel-perfect, cross-browser compatible user interfaces using Material UI and CSS.
- Standardized frontend-backend communication by collaborating with backend teams to define REST API contracts, OpenAPI specifications, request validation, and error handling mechanisms.
- Integrated secure authentication, authorization, protected routes, and role-based access control across enterprise applications while improving application security and user experience.

Infogain

May 2018 - Mar 2021

Software Engineer

Tech Stack: React.js, JavaScript, HTML5, CSS3, Node.js, REST APIs, WebSockets

- Developed customer onboarding, account management, transaction history, beneficiary management, and payment workflow modules for enterprise banking applications using React and JavaScript.
- Integrated more than ten REST APIs with reusable service layers, improving frontend maintainability and simplifying backend integration across multiple banking products.
- Built real-time customer support interfaces using WebSockets and HTTP polling, enabling instant notifications and live status updates for customer service representatives.
- Delivered accessible, responsive, and WCAG 2.1 AA compliant user interfaces that improved usability across desktop and mobile browsers.
- Improved application quality by increasing automated test coverage to approximately 75% using Jest and React Testing Library, reducing production defects and improving release confidence.
- Collaborated with cross-functional teams including business analysts, QA engineers, and backend developers to deliver multiple banking features within Agile sprint cycles.
- Participated in production releases, defect triaging, root cause analysis, and performance tuning, ensuring high availability and stability of customer-facing applications.

Selected Engineering Projects

AI Enterprise Knowledge Assistant

- Designed and developed a full-stack AI-powered knowledge assistant using React, Node.js, Express.js, and OpenAI APIs to enable employees to retrieve enterprise documentation using natural language.
- Implemented prompt caching, conversation history management, streaming responses, and reusable API services, reducing OpenAI API costs by approximately 25%.
- Built responsive chat interfaces with Markdown rendering, syntax highlighting, loading states, and conversation persistence.

Enterprise Analytics Dashboard

- Developed enterprise dashboards for business intelligence and KPI visualization serving over 10,000 daily active users.
- Optimized rendering performance for large datasets exceeding 50,000 records using virtualization, pagination, memoization, and efficient state management.
- Built configurable widgets, advanced filters, export functionality, reusable charts, and responsive layouts for business users.

Reusable React Component Library

- Designed and implemented reusable UI components including tables, forms, modals, accordions, cards, navigation components, and data visualization widgets using React, TypeScript, and Material UI.
- Standardized component APIs, accessibility practices, and styling guidelines to improve development consistency across engineering teams.
- Reduced duplicate UI development effort by nearly 40% while improving application maintainability.

Key Technical Achievements

- Reduced enterprise banking application page load time by 30% through frontend performance optimization.
- Improved Lighthouse Performance Score from 62 to 89 using code splitting, lazy loading, image optimization, and bundle optimization.
- Reduced Redux boilerplate by approximately 40% through migration to Redux Toolkit and RTK Query.
- Scaled enterprise analytics applications supporting more than 10,000 daily active users.
- Maintained user interaction latency below 100 milliseconds for datasets containing over 50,000 records.
- Reduced OpenAI API operational costs by approximately 25% through intelligent prompt caching and backend optimization strategies.
- Mentored junior engineers through code reviews, pair programming sessions, and technical knowledge sharing.

Education

Bachelor of Technology (Computer Science and Engineering)

2014 – 2018

Dr. A.P.J. Abdul Kalam Technical University, Lucknow
